

ORBITER CHIP TIMING RENTALS

No Mats, Wires or Overhead Structures.

Now, you can time your own race with the Orbiter SPIRE. (The Orange Stand-up shown). Here is how it works: First, turn the machine "on". Next, know who you gave the bibs to. Then, make the machine "beep" as people cross the finish line. All other administrative work is be done in any order before, during or after the race.

The Orbiter SPIRE has twice the read range as the SLING. It is appropriate for lap counting, 24 hour or extended races, bikes and races with 1000 people or more. The Spire beeps in real time as people pass over the top of the Finish Line. Time accuracy is assured because the beep happens for all to see.

If your race is on a weekend, the Wednesday prior to the race you will receive the rental unit in a small suit case with everything you need: (Chipped Bibs, Laptop Computer, and the SPIRE reader). We will practice with you for 45 minutes with three practice races to help you get ready for your race day. Then, on race day we are available on the phone to help or answer questions related to your rental immediately. Call us today to rent your Orbiter!
